

FRG DETECT

Wireless, self-powered video verification intruder detection

Video verification intruder detection is crucial when protecting unmanned environments such as vacant buildings, substations, outdoor sites and construction/infrastructure projects to eliminate the costs associated with false alarms.

FRG Detect is designed and tested for use in the harshest of environmental conditions, alerting potential security breaches before they occur.

Our wireless systems demand no existing infrastructure and can be installed or relocated in a matter of minutes for immediate protection, day and night.

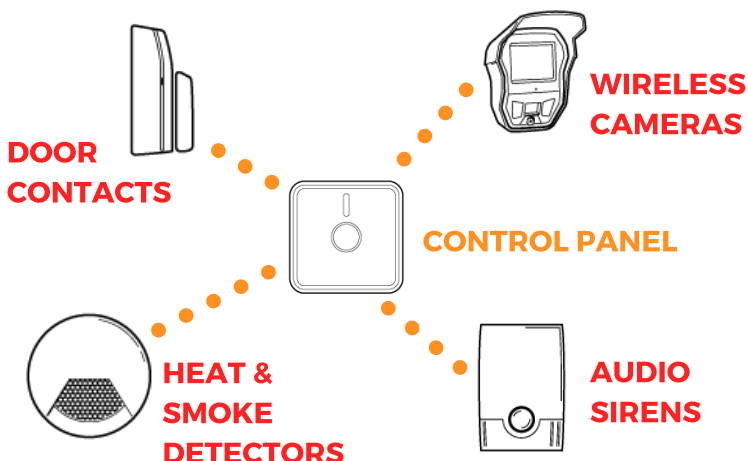

The camera units are battery powered and remotely monitored 24/7 by the FRG Control Room, making FRG Detect solutions the ideal choice for unsupported or remote locations.

VERSATILE SECURITY

From one wireless control panel a range of modules can be added to the FRG Detect system to meet your specific security requirements.

KEY FEATURES

- Easy & quick to install
- Stand alone with long battery life
- Tamper & damage detection
- Mobile app for real time remote monitoring
- 4 infrared LEDs for 12m night vision.
- Fully weatherproof & operational -20° to 60°C
- Portable - re-position as the project evolves or move to a new site.
- Additional modules
