

MAPS Mobile Asset Protection System

Our Mobile Asset Protection System, or MAPS for short, is a technologically advanced wireless security system that can be rapidly deployed to sites that require an effective visual deterrent and flexible on-site positioning.

This industry-leading mobile security system features an impressive 70 metre, 360-degree detection range and wireless monitoring through its 4 fixed HD cameras, providing incredible image quality. This system also provides ultra-fast image transmission speeds from site to operator, ensuring any possible issues can be actioned in real-time. In the event of an intruder on site, MAPS also features both live and pre-recorded audio voice challenge to further deter would-be trespassers.

Deterring crime from the outset is always the best possible strategy, and due to its formidable size and visual presence, MAPS provides a real deterrent against criminal activity. Advanced features such as object recognition and powerful LED lights are included with this system alongside GPS tracking and tamper detection for enhanced system protection.

Our national service teams can deploy MAPS within 24 hours throughout the UK so if you're looking for a cost-effective, feature rich security deterrent, then MAPS has you fully covered.

Contact FRG today to book your site risk assessment.

Why choose FRG?

Technologically advanced range of security products to suit all environments

Free site survey to advise on the most efficient and cost-effective solution

24/7/365 monitoring from the FRG Control Centre

Significantly reduce upfront costs by renting, rather than purchasing

All maintenance included within the rental agreement

A truly national service team that can be rapidly deployed to any UK location

We listen – We respond – We deliver

DEFENSIVE MEASURES AND SYSTEM PROTECTION

Links criminals to their crime scenes through state-of-the-art synthetic DNA technology, enabling police to later identify intruder. SelectaDNA signage also provides an additional highly effective visual deterrent.

- GPS tracking
- Tilt and tamper sensors

ADVANCED CONNECTIVITY

Advanced connectivity features ensure secure remote access to video footage and audit events for customers and operators.

- 4G/2G Mobile communication with network roaming
- Advanced real-time reporting
- Customer portal
- Mobile App connectivity
- Up to 4-year battery life

EFFECTIVE DETERRENT

MAPS provides a real deterrent against criminal activity, whilst still remaining quick to deploy and easy to relocate.

- 1.6m tall and 60kg weight
- 4 ultra-powerful high efficiency LED lights
- Pre-recorded or live ultra-loud audio challenge
- High visibility fluorescent decals
- Optional SelectaDNA spray with warning signage

INDUSTRY-LEADING DETECTION

Due to the impressive detection range of MAPS cameras, we can cover a larger site area using less units, saving customers considerable cost.

- 70m diameter PIR detection range
- 360-degree vision
- 4 fixed high-definition cameras
- Fully mobile unit allowing easy repositioning

INTELLIGENT TECHNOLOGY

Incredible high-definition video quality, day or night, with a range of advanced technological features usually found in much higher priced systems.

- Ultra-fast transmission speeds from site to operator ensuring faster response times
- Object recognition to help reduce false alarms and promote actionable intelligence
- Camera masking creates privacy for sensitive areas

Who needs MAPS?

MAPS is an ideal security solution for site owners with the following needs:

Smaller sites that need less area coverage

Essential coverage of highly valuable assets or compound areas

Rapid 24-hour deployment throughout the UK

Sites where flexible security and mobile positioning is required

Sites working with lower security budgets
